Projects:

1. Web based agriculture market

- Technologies- JAVA, IDE- Eclipse
- A "Web-based Agriculture Market" which has the ability to customer can easily buy products online and cancel choice and the farmer will get the required profit by selling the products online with ease.
  - It consists of three distinct module Farmer, Admin, Customer.
  - Managed online marketplace for agricultural products, connecting farmers and buyers for efficient transactions.

2. Weather App

Developed a comprehensive weather application leveraging a full-stack technology stack, including HTML, CSS, Java, JavaScript, JSP, and Servlets. The application provides real-time weather updates, utilizing API integrations to fetch and display accurate weather data. I designed and implemented a user-friendly interface with responsive design principles, ensuring optimal user experience across various devices. The backend was structured using Java, with JSP for dynamic web page creation and Servlets to manage data flow and user requests.
