Name: Vaishnavi K. Pardeshi

Email: vaishnavikp83@gmail.com
Mobile: +91 8329085611

CAREER OBJECTIVE

DevOps Engineer with around 1.5 years of hands-on experience in architecting/automating andoptimizing critical deployments over large infrastructure. Proficient with DevOps automation tools and configuration management tools and in developing CI/CD pipeline.

WORK EXPERIENCE: **2024 February – 2024 May.**

1) The Digital Group

DevOps Engineer

Pune, India.

ROLES AND RESPONSIBILITIES:

- Attended daily Scrum Calls to stay connected with the team. Proficient in **Atlassian Jira** for effective bug tracking, project management, and collaboration.
- Expertise in Source Code Management and repository tools **Git.** Configuring Git server and providing access to Developers. Experienced in branching, merging, tagging and maintaining the version while using SCM tools like **Git**.
- Skilled in using **Terraform** to manage infrastructure as code, ensuring consistency and efficiency. Used **Terraform** for creating new infrastructure or to modify an existing infrastructure.
- Written **Terraform** templates to create custom VPC, EC2, Security group, NAT, NACL, to ensure successful deployment of web applications. Automated Infrastructure on public cloud platform **AWS** using **Terraform**.
- Defined variable file **[*. tfvars]** in **Terraform** to create a reusable file for all the variables for a project.
- Write **Terraform Modules** for reusability of code and can save time and reduce costly errors by reusing configuration. Secured **Terraform State file** using Terraform Backend with **AWS S3** Bucket service.
- Developed a three-tier application by utilizing Hashi Corp Configuration Language [HCL] with **Terraform**. Deployed a static website on an AWS S3 bucket using Terraform.
- Developed and automated **scripts** for data processing, file handling, and task automation.
- Utilized **Bash scripting** for server setup, user management.
- Experienced with conditional statements, loops in **Bash**.

2) **Hisan Labs Pvt. Ltd.** **2023 May – 2023 December**
DevOps Engineer
Pune

- Writing Yaml-manifests in **Kubernetes** for **pod creation**, **deployment-set**, replica-set, config-maps, Resources-Quotas**, Ingress resource**s and cluster management, also ensured **high availability** and scalability for containerized applications with the help of deployment strategies and auto-scaling methods to accommodate the workloads.
- Proficiently Operated Docker for containerization encloses the complete **Docker lifecycle**, from creating Docker files, building custom images, and pushing them to image registry to **Dockerhub**.
- Mounted a **Docker volume** to securely share data between host machine and containers.Created custom docker network to isolate services and controlling communication and improve performance.
- Hands on expertise in implementing Continuous Integration tools. Used **Jenkins** andimplemented **CI/CD pipeline** configuration for each stage deployments.
- Expert in performing tasks as Installing **Jenkins**, created build jobs, **seed jobs**,Administration, managed plugins and Backup activities.
- Implemented monitoring architecture using **Prometheus** and **Grafana** to track system and application performance.
- Used **Grafana** for creating custom dashboards, analyzing data and metrics using **Prometheus**
- Set-upped Loki for logging and monitoring and integrated with Grafana for Dashboards, having knowledge of **PromQL query language**.
- Utilized edge locations and regional locations to reduce the latency using Cloud front and managed the organizations domains through **Route53 Services**.
- Configured **Prometheus** for data collection from various sources. Created **Grafana dashboards** that provide real-time visibility into system and application metrics.

3) **InfoBeans Technologies Pvt. Ltd.** **2022 January – 2023 March**
Software Engineer
Pune.

- Streamlined **AWS EC2** instance management and achieved optimal resource utilization. Implemented security groups and Network Access Control Lists (NACLs) on **VPC** to control inbound and outbound traffic to **EC2 instances**. Define IAM (Identity and Access Management) roles and policies to grant appropriate permissions to EC2 instances and other AWS resources.
- Implemented **Auto Scaling** to automatically adjust the number of EC2 instances based ontraffic. Configure load balancers, for distributing traffic across multiple EC2 instances to achieve high availability.

- Utilized **S3 service** as a platform for static website hosting. Used S3 as a Block storage forstoring Data and retrieving the data accordingly through intelligent tiering.
- Provisioned and configured Linux servers, Created and managed users in **Linux**.
- Developed comprehensive **manual test cases** based on project requirements and user stories, ensuring thorough coverage of functional and non-functional aspects of the application.
- Developed **test cases** to validate boundary conditions, edge cases, and error-handling scenarios, ensuring robustness and reliability of the software under various conditions.
- Collaborated with cross-functional teams to understand project requirements and translate them into comprehensive **test plans**.
- Created and executed detailed **test cases**, **test scenarios**, and **test plans** based on requirement documents.
- Identified, reported, and tracked bugs using **Jira**, ensuring prompt resolution and thorough documentation.

Technical Skills:

Cloud Platform	Amazon web services
Containerization and Orchestration Tool	Docker, Kubernetes
Version Control Tools	GitHub
Infra Provisioning tools	Terraform, Ansible
CI/CD tools	Jenkins
Scripting languages	Shell-Scripting, Groovy
Operating systems	Linux (RHEL, Ubuntu)
Monitoring & Logging Tool	Cloud-watch, Grafana, Prometheus
Team Collaboration	Jira.
Backend Language	Python
Frontend Language	HTML, CSS

Educational Qualifications:

BE Computer Engineering

Pune University

CGPA: 8.89

Diploma in Computer Engineering

Pune University

Marks: 76.53%
