Summary

Detail-oriented Payroll Analyst with expertise in payroll processing, timesheet validation, compliance, and data accuracy. Skilled in ensuring error-free payroll operations, maintaining employee records, and handling payroll queries with efficiency. Proficient in Excel, SQL, and payroll tools like ADP and Paycom, with a strong ability to analyze payroll data and generate actionable insights. Adept at collaborating with teams to enhance payroll efficiency while maintaining confidentiality and compliance.

Technical Skills

Technologies: Tableau, Power BI, SQL, Python, MS Office, MS Excel.
Payroll Tools: ADP, Paycom, Chime.
Skills: Data modeling, visualization,Teamwork and Project management, payroll processing, Timesheet processing, attention to detail, communication, and audit support.

Experience

LMDmax Corp **June 2024 – Nov 2024**
Payroll Analyst *Jaipur, Rajasthan*

- Processed payroll for over 400 employees on a weekly and biweekly basis using ADP and Paycom, including salaries, benefits, and deductions, ensuring 100% accuracy.
- Managed timesheet validation, payroll adjustments, and compliance with local regulations.
- Maintained payroll records, employee data, and reports while ensuring data confidentiality.
- Ensured compliance with internal audits and legal requirements, contributing to a 15% reduction in payroll errors.
- Provided invoice support and assisted in responding to payroll-related queries efficiently.

Innomatics research labs **Feb 2023 – May 2023**
Data science intern *Hyderabad, India*

- Utilized data processing and analysis skills to enhance payroll data workflows, applying machine learning techniques to identify trends and improve reporting efficiency.
- Utilized machine learning tools to process and structure data, delivering insights through statistical analysis.
- Created visualization dashboards to present data findings effectively

Projects

Emotion Recognition-based Music Recommendation System | *Python, TensorFlow, OpenCV, Spotify API*

- Implemented a Convolutional Neural Network (CNN) model using Python and TensorFlow for emotion recognition on images.
- Achieved an accuracy of 91.45% after training the CNN model with the pre-processed dataset.
- Integrated OpenCV for real-time emotion detection on video streams captured from a webcam or video file.
- Utilized the Spotify API to recommend music based on the recognized emotion, fetching popular songs and playlists matching the emotion label.

Education

Master of Business Administration (MBA) In Artificial Intelligence **2021-2023**
Graphic Era (deemed to be) University *Dehradun, Uttarakhand*

Bachelor of Commerce (BCom) **2018-2021**
University of Delhi *Delhi,India*
