PROJECT

Role of Robo-Advisors in Simplifying Investment Decisions

May - july 2025

- Researched how robo-advisors collect and use user data (income, risk profile, financial goals) to provide personalized investment recommendations.
- Conducted a structured study using primary data (questionnaire) and secondary research from journals, articles, and industry reports.
- Evaluated key factors such as user satisfaction, trust, transparency, accessibility, data security, and personalization.
- Identified major challenges including limited awareness, trust gap, and lack of human interaction impacting adoption.

Understanding Farmer Cooperative Intention to Adopt Digital Technology.

Aug - nov 2024

- Studied key factors influencing farmer cooperatives' intention to adopt digital technologies.
- Collected and analyzed primary data to understand farmers' digital awareness and real challenges.
- Examined how usefulness, ease of use, and trust affect farmers' interest in using digital tools.
- Identified major barriers and suggested practical recommendations to improve digital adoption in rural areas.
